A Word From The Editor

You hold in your hands the last mathNEWS of the term. I hope you have enjoyed mathNEWS this term; we have tried to be a little more innovative and, as usual, to have fun. I would like to thank everyone who made any sort of contribution at any time this term. Special thanks to the staff who often don't get the credit they deserve.

Look forward to a new mathNEWS in the summer. Those of you leaving town may want to subscribe to mathNEWS - it'll be worth it.

Well, thanks again and goodbye all.

dan schnabel

Prezz Sezz

Happy Spring!! It is very unfortunate that associated with the seasonal improvement in atmospheric conditions is the ever-dreaded and fast approaching period of depression and bad tempers known as final exams.

But not to worry. MathSoc as usual has something planned to help you shake those pre-final blahs.

April 1 at Fed Hall in association with (yes the rumours are true!) EngSoc, MathSoc presents the EOT Last Chance to be Foolish Pub! Included in this gala event is the ever popular Karnival King Kompetition. What exactly is a Karnival King? Let's just say guys who get urges to shop at Suzy Shier would probably be leading candidates to win this show! In other words, A Guy's Beauty Pageant in Drag! It promises to be a great time so don't miss out!

Seeing as this is the last mathNEWS for the term I'd like to say thanks to all those graduating students. Some of you I have known since the time I started at UW and since then have become very valued and trusted. I will miss you a great deal. At the same time, I wish each and everyone of you the very best of luck in your new careers and hope that you'll be back in November for Homecoming '87.

Speaking of grads, a special word of thanks to Shelly, Brenda and Ilia for planning a great Grad Ball. All the hard work and long hours spent were really worthwhile. Thanks also to all those who helped in any way. Special congrats to Brian Fortune, this year's recipient of the J. Alan George Award!

I hope everyone has a healthy and happy summer and I'll see you again in the fall.

Dave

Prof Quotes

Here's a few more prof quotes to take you into your workterm.

"All my Chinese students love orientations ... you didn't laugh ... I'd better consult my Chinese Joke Advisor."

Honsberger, C&O 230

"Close the door. It's driving me mad. Lots of things drive me mad."

J. Wainwright, Math 140B

"It's hard to get good students. I think I'll go back to my office and read my job description."

M.J. Best, C&O 350

"A pole of order one is called a simple pole. This is not a racial statement."

J. Baker, Math 332b

"I was using double, single subscripts, but you can use single double subscripts if you want."

B. Char, CS 487

"Time goes on for a long while."

Dr. Hui, AM 478

"Instead of s I'm writing z to get us in the mood for complex integration."

D. Siegel, AM 481B

ISSN 0705-0410

MathSoc Office

With finals quickly approaching, you will want to start early with the photocopying of past finals. The MathSoc office now has 2 photocopiers and lots of old finals. Remember we are open from 8:30 each morning to 4:30 at night most days. During finals the office will be open on Monday, Wednesday and Friday from 8:30-11:30 up until April 10 and then it should open again around May 5.

Good Luck with finals!

Yearbook Distribution

The Yearbooks will be distributed at Convocation on 30th May, probably when you return your gown. Your receipt will only be necessary if our backup lists don't record your purchase, so be on the safe side.

BUT...if you will not be at convocation and purchased a yearbook, you can have it mailed out in May. Watch out for posters about sign-up in the next week. It will probably be \$4 in Canada, \$5 over-

IF you miss both of these, you'll have to pick them up from MathSoc after the end of May.

For those who were wondering, there won't be any Math Grad Ball pictures in the Yearbook (the yearbooks wouldn't have been ready by May). Sorry.

Congratulations to all graduates. Good luck on exams, and we'll see you at the end of May.

Free! Free at Last!

The worst moment in my life occurred (it seems eons ago) when Needless Hell threw the book at me: The University of Waterloo Undergraduate Calendar. It was then I realized I had to serve a five year sentence as an undergraduate student or choose the four year hard labour option. Being eighteen at the time, five years might as well have been a lifetime. I chose the four-years-in-hell plan. If I could go back four years I think I'd kill myself.

But now it's over. I practice saying this every night, O-VER. I've been running a count-down for a couple years now. It's so difficult to say "five hundred and eighty-four days"; but "twelve days" rolls off

the tongue like a wave to the shore.

So you're thinking: "He can't be all that happy. After all, exams are still coming up, and fourth year exams are tough, and, and, and, IT'S NOT FAIR!". That's right! It's not fair. Fourth year exams are easy. Face it, only a professor who's a real asshole would burn a graduating student on his last exam; those professors teach the lower years. But there's more! When you're fourth year, even if you get all lifties for your final grades, your average won't slip more than 3 or 4 percent! Fourth year students will soon get jobs that pay real money. Of course the students may choose to go to Graduate School, but even then the University pays you to study there. So, when it comes to exam stress, the question that every fourth-year student repeats with a satisfying grin is, WHO CARES?

The best part to graduating has to be watching people who aren't. I can't walk down a single hallway without falling into fits of laughter when I look at someone proudly displaying a Waterloo jacket with a "91" on the sleeve. A "91" for God's sake! They'll never get out of here! Now I know why fourth year students laughed at me in the

past. I thought it was because they liked me. So now that I'm taking off to the REAL WORLD, I suppose I should say something like I'll miss the university ...

Bruce (I'm so wasted) Sutherland

More Info Needed on **Student Reports**

You may not be aware of this, but the "Student Examination Reports" (i.e. the "unofficial" transcripts sent to each student at the end of every term) vary from faculty to faculty. The math reports, as you probably know contain just the course number and mark received, but no information on the course content.

The math report is short and concise, however to anyone not with the University of Waterloo or anyone who does not have a UW calendar handy, the report contains a lot of meaningless information. For

example, what is C&O 230, or Math 134B, or CS 354?

Over the last two weeks, I have suggested to certain members of the Math faculty, that our examination reports be modified to include at least the course names (i.e. CS 354-Operating Systems). With this addition, the specific subject matter of each course would be indicated, increasing the usefulness of the report. The request for such a change is in no way outrageous since this format is already used for "official" transcripts. The engineering examination reports (which have a much more elaborate format than ours) do include the full course name.

So, why has the faculty kept the current report? The faculty's arguments consist basically of two points: 1) the cost and 2) their opinion that the report is designed to be an internal document. The first point doesn't bear much weight; after all, what's a few extra sheets of paper? The second point would be valid if the document was indeed "internal" (i.e. then a short format is desirable). From the faculty's viewpoint, the report may be considered internal, but surely most students do not feel that way. Often, the report is used when applying for scholarships or jobs. More significantly, Co-ordination and Placement sends these reports to all our co-op employers. Remember, many of these employers also receive the engineering reports. I wonder which ones are more meaningful to them?

With the hope that the faculty will appreciate my point and consider the modification to the report, I am pursuing the matter further. MathSoc council has given me their support, and I would appreciate your suggestions or comments (via mathNEWS or MathSoc office) concerning the examination reports or the official transcripts.

Dear mathNEWS

There are two things that I do not like about mathNEWS. The first thing is that you never know what articles are serious and which ones are the usual "joke" articles. Last week's issue was a prime example. The article about the Davis Building was a real stumper. I do not know if hobos are really hiding out in the building at night, or if it is true that the building is being built on an ancient burial site. I do know that the part about a 50 foot picture of Doug Wright being hung there is true but only because I have seen the negative, but the other stuff has got me twisting and a turning. I'm sure there are other people who get just as confused with some of your articles as I do. I suggest that in the future you put a little caption at the beginning of a serious article that says simply "Serious Article". This caption will warn readers that the article to follow will not be the standard low key humorous story, but something out of the ordinary. It's not really a big deal - I mean you'll probably only use the caption once or twice in a decade, but still, its a good thing to have. Please consider this idea

The second thing I hate about mathNEWS is that you guys never read your mail and respond to letters like this.

Zlatko Radisic (KO-OP KID)

Dear Sirs,

We of the Official Scary Monster Party are greatly distressed by your coverage of our candidate, Zoltan Horcsok, in the previous issue of mathNEWS (Feb 27, 1987). To suggest that our alien arts director was on drugs at the time of the submission of his platform violates the principles of the Official Scary Monster Party and all creatures from the planet Koozbane, such as he is (without Koozbanian vigilance, the evil zucchini beings would have pummelled Earth into blak fluff eons ago.) I submit to you, the OSMP's official policy regarding drugs, which was printed in the CordWeekly on Thursday, October 9, 1986.

"It is come to my attention that Laurier is considering initiating a drug plan. This bothers and keeps me up at night. Aren't drug's illegal? This concerns my parents greatly; they say drug are bad. They say drugs make you impotent and grow hair on your palms and make you irregular.

"What I propose is something more legal, like a drink plan. Under this, one would pay a flat fee and receive a whole term's worth of legal, alcoholic beverages. This could solve the whole problem of counting change at the Turret. I think this is much more feasible than the Student Union's idea of getting a buffet bar with a whole potpourri of uncontrolled pharmaceutical substances. I'll have to think about this."

Paul Mitchell President of OSM

Dear Scary Monster Party

It comes as a great offense to our editorial staff that our objective reporting of drug use at Laurier was taken to imply that only Zoltan was under the influence of mind altering pharmaceuticals. Zoltan, as an alien, is most likely immune to such substances. It is our contention that Zoltan was speaking so as to be comprehended by those business administration students suffering from the drug haze your administration requires to stifle the creative instinct in order to create the plodding pedantic ultra-conservative beings who go on in life to become accountants, hotel managers and income tax auditors. We here at mathNEWS applaud your position on these mind and life altering substances but fear that the imminent demise of your entire student population to a seething sludge of degenerated brain mass is already irreversible. Our condolences to Zoltan, as he is soon to become the last lonely ruler of a brain dead student population.

sincerely mathNEWS

Please, Mr. Postman ...

And he'll always ring twice. Gad! End of term at last! Time to burn through a few exams and head off to well deserved oblivion. But wait!, There remain a few unanswered questions. Will Watman and Duck Live after Death? Does the summer's MathSoc president have a squeeze in Windsor? Are there any long-term side effects that one can expect from exposure to Bad Acid Issues? And, most important of all, can you survive a term (or longer, for those lucky grad types) without GridWord, Prof Quotes, and a smattering of other creative silliness from the twisted and demented minds at your favourite fun publication, mathNEWS? (Um ... where was I? Oh, yeah.) The fates have smiled upon you ... mathNEWS is pleased to offer Summer '87 subscriptions at the eminently reasonable price of \$4.50 for Canadian addresses, \$6.00 outside the Dominion. (Of Canada, not to be confused with the little guy who sells watches at the A&P.)

To get your subscription, just mosey on in to MathSoc (MC 3038, the room with the Nifty New Photocopier) and tell the office worker what you want. Speak very slowly, and be patient. Sooner or later they'll catch on, and sell you the subscription.

Have a fanatic summer, and we'll see most of you in the fall.
ma-ma-ma-ma-ma-ma-ma-ma-ma-ma-mathNEWS!

Displacement

Back in the Ancient Times of High School Physics, an age when Commodore Pets ruled the Earth, some hapless teacher introduced us to the concept of displacement. Essentially, we learned that it was possible to do an awful lot of work, and a great deal of moving, and end up going nowhere. It was a pretty simple concept, and the sun was shining, so we probably didn't give it much thought.

Now, some years later as I embark on the Great Apartment Hunt for what seems like the hundredth time, I am drawn to consider the concept of displacement as a metaphor for Waterloo existence.

At first blush, the metaphor is dark and foreboding. A chill wind of recognition blows through the bones. The message is all too easy to perceive: it seems to perfectly describe UW life, especially for those of us in co-op. In purely physical terms we expend a great deal of energy and money travelling great distances in five years. To what effect? In all likelihood, between September 19xx and April 19xx + 5, your net displacement is one chair to the left in the C&D, which seems rather futile.

However, displacement also has a more human meaning: the feeling of transience, of not-belonging, that so easily develops here. We all become more and more displaced. From our families and high school friends when we come here. From our new friends at UW, courtesy different streams and different co-op cities. From the very sense of belonging someplace that comes from being part of a home for more than a few months. It is all too easy to become lost in the machine, a rootless waif adrift in the wind.

But what causes this displacement? The passage of Time. Here is the ray of hope admist seeming gloom. It is a light at the end of the tunnel now being fiercely embraced by our compatriots in 4B, of course. But there is more than that. Certainly we return to the C&D time and time again, like swallows to Capistrano, but each time we are subtley different, changed and matured. Here is the difference from the displacement of Physics - the body returns, but the spirit is not the same. The net displacement is NOT zero. Of course, not all changes are positive, nor all differences signs of maturity. That is a choice and a burden laid on each of us. As we move through time whilst anchored to this tawdry little space, we must endeavour to make our displacements positive, without losing what we hold dear.

Good-bye friends! Perhaps in September, if displacements permit.

Dr. Terrence Till

THE ADVENTURES OF

COMMAN

Last issue we ... uh ... well ... dynamic duo ... uh ... drugs Well, nobody seems to know what to make of last issue.

"Holy Bobby Ewing reincarnations Watman," Duck exclaimed as he typically does, "What happened? Thousands of profs, red tape, Myron Baloney - I don't know what to make of last issue?"

"You were dreaming Duck. Needles Wainwright (the current villain) has been filling this room with marijuana smoke. I, unlike you, thought to make raisin bran a part of my well balanced breakfast and consequently remained unaneffected."

"I don't do stinking raisins."

"Never mind about that now Duck, just listen."

A hissing sound found its way to Duck's ear drums where earlier there had been raisin bran. The smoke was thinning, escaping from the room through a gap in the plot. With their vision restored they found themselves in a small room filled with books.

"Holy Dana Porter Watman, there must be hundreds of books in here."

"I count 401 Duck. Do you know what this means?"

"We're in a bookmobile travelling down the 401 to Toronto."

"Exactly! And Needles, who is just behind that door, is driving and he is going to have us both archived to where we can no longer fight crime and chat up the girls at Scoops"

Then, with their strength regained, they easily broke the chains bonding them to a copy of *Physics* by Halliday and Resnick. Seconds later the aforementioned door was ripped from its hinges and a startled villain dragged from his seat.

BIFF!

THWART!

KLUNK!

Alone and taken by surprise Needles Wainwright was easily constrained.

"You'll never win Watman!," he yelled, "You'll all be placed! I'll show you!"

Watman and Duck took control of the bookmobile with the villain safely stowed in the back.

"His threat was disturbing Duck. We'll all be placed? Hmm...."

"That reminds me Watman. Coordination and Placement found a job for me. I'll be working in Toronto this summer. As long as we're half way there, can we take the rest of the afternoon off to look for a place to live?"

"Certainly Duck."
The Duo drove on.

Ah, Toronto, perhaps the most beautiful capital city of Ontario. Home of the world's tallest freestanding structure - Eddie! With its shops and restaurants it projects an image of sophistication. Yet it retains character with a healthy collection of street vendors, street musicians, impoverished bums and protestors who band together to stop the proliferation of orthodontists with fat fingers. Ah, Toronto - a somnambulist's nightmare.

A few phone calls and our heroes were off to meet a man in Queen Street's wino district. He seemed suspicious but unfortunately the diurnal duo did not recognize him - it was the evil co-op workterm landlord Dr. No!

"Don't you think \$450 a month is a little high?" Duck began.

"No."

"Does that include utilities?"

"No."

"Is it furnished?"

"No."

"Will I get a parking space?"

"No."

"Is there a laundromat nearby?"

"No."

"Public transit?"

"No."

"Can we see the place?"

"No. No, wait. Sure you can. It's getting late, let me drive you wo there."

"Thanks," replied Duck, and soon they were on their way.

After a short drive, Dr. No pulled into a dark alley and led our heroes to a large door. Suddenly six enormous men, each as evil as a Fed Hall bouncer, seized our heroes.

WHACK!

CRUNCH!

POWIE

BOING BOOM TSCHAK

Severly roughed up, Watman and Duck were thrown through the doors. The door was locked behind them. Our heroes were alone in a dark and noisy place, but soon found another door. Upon opening the door the noise boomed, lights flashed and they realized where they were - IRON MAIDEN! It was a spectacle - screaming fans, girls in tight jeans, Timothy White, noise, lights and IRON MAIDEN!

"We're going to die," screamed Duck as 12 head-bangers threw our two heroes into the flaming bowels of Iron Maiden's mascot Eddie

The dynamic duo died.

ARK: The Alternate Reality Kit

The Alternate Reality Kit (ARK) is a project under development in the Xerox PARC System Concepts Laboratory. ARK is an animated environment for creating interactive simulations. It is a kit of parts in which users can assemble their own "microworlds." The interface is quite faithful to a physical world metaphor: all objects have a visual presence, a velocity, and can experience forces. One of the objects on the screen is a disembodied hand, which moves around in response to a mouse. The user's "hand" can carry and throw objects, and can press buttons. In ARK, even the underlying simulation laws are represented by physical objects called interactors. Interactors are important actors in the story of how ARK attempts to enable intuition by making abstractions concrete. Although the implementation is still evolving, ARK has already hosted dozens of experimental subjects. This presentation will feature videotape of the system, discuss the underlying motivations for the design, and describe some of the experiments. Future plans, which include making ARK a self-contained programming environment, will be discussed.

Where is Mom When We Really Need Her?

An open letter to 'The Big Baboon'

That's right. The layout boys didn't make a mistake. "Just where is Mom when you really need her?" That's the question we ask ourselves more and more often of late. We have long understood that the university community at Waterloo consists of a vertical slice of society as a whole (and not the horizontal strata of intellect that the image presupposes). And within our community, there is a subgroup which makes its presence known in a persistent manner. These are the individuals who always had "Mom" to clean up after them. Spill a cup of milk. Track mud into the house. Litter your room. "It's O.K. 'cause Mom'll look after it." There is little evidence to contradict this postulate. Observe the graffiti coated carrels on the fourth floor. Observe the trash that adorns the classrooms. Observe the remnants of sticky posterage that cakes the south-west entrance doors. Observe the bootprints on the (less than two year old) furniture in the third floor lounge. (They are fast approaching Campus Center critical mass!) Observe! We urge the reader to tour the C&D lounge this Friday afternoon to view the debris. "Where is Mom when you really need her?"

Most recently, however, one particular member of this league has escalated his/her/its personal campaign for heightened levels of general entropy. That is to say that the external organ of mathNEWS, the "Black Box" (or alternatively, the "flight recorder"), was wrenched from the third floor wall three weeks ago. And that is a first.

We can only imagine a finite number of scenarios capable of precipitating this heinous affair:

- Editorial Comment A particular reader of mathNEWS (or possibly the concerned relative of a reader) felt the need to vent their frustration over mathNEWS' content and editorial policy. Full marks for effort. The freedom of expression is an integral component of a "free society." But remember that your approach made the Vandals what they are today. Next time, write (print? dictate?) a note and place it carefully in the box.
- The Thrill of Victory A particularly athletic type placed their approach shot to the southwest elevators under the Black Box during the "MC Invitational Croquet Tournament", and had to move the Black Box to obtain an unobstructed backstroke. Remember that such actions are strictly prohibited by the official "Mathie Indoor Croquet Rule Guide". Next time, find another way to cheat and leave the box alone!
- Mutual of Omaha's "Wild Kingdom" The filming of "The Neolithic Man's Distant Past" epsiode prompted the Big Baboon to put on a display for Marlin Perkins' ghost. The Big Baboon simply worked him/herself into a lather and then tore the Black Box from the wall in a demonstration of intellectual prowess. One can imagine subsequent episodes: "The Big Baboon Takes on Wall-Mounted Ashtrays" ... and then "The Dean's Door" (it's only fastened by two tiny hinges) ... and then ... a special two part episode with the Big Baboon atop the MC building fighting off Canada's CF-18 fighter while clutching the "CS-sculpture" (from the front lawn). Catch it in reruns! Next time ... will there be a next time?

The point is, Big Baboon, that if your "Mom" were here now, she'd probably pick up after you (again) and mathNEWS wouldn't have to pay to have the Black Box reaffixed. She'd probably beam with delight if she only knew what a strapping brute you've grown to be. But where's Mom when we really need her?

With best wishes for your future demise,

Martin - Siegfried

Math Column

Correct solutions to last issue's problem were received from the Great Gazoo, Ken Lowe, icu2, and Issie Chaimovitch.

My solution (which is not necessarily the best) is as follows. The of the characteristics among the 100 people is 70+75+85+90=320. Let X people have all 4 characteristics meaning that the remaining 100-X people have at most 3 characteristics. Thus, $4X+3(100-X)\ge 320$ giving $X\ge 20$. X=20 is the minimum with the other 80 people having 3 characteristics each distributed as follows: 30% have char. 2,3,4; 25% have char. 1,3,4; 15% have char. 1,2,4; and 10% have char. 1,2,3.

Since it appears that problems involving something which can be physically played with (e.g. the paper folding puzzle) are most popular, I will give a "broken line through dots" puzzle. The object is to draw a broken line, consisting of the minimum number of joined straight-line segments, that passes through the dots, starting at a dot and ending at a dot. The broken line is allowed to intersect itself. For the 9 dots shown below, there is only one solution of 4 linesegments provided that broken lines which correspond by rotation or reflection are considered to be equivalent. For 12 dots, to keep the number of solutions finite, the line-segments can pass through each dot once only (except dots where one line-segment ends and another begins), but each must pass through at least 2 dots. For this, there are 19 solutions with 5 line-segments. For those who want a real challenge to prepare them for exams, try finding as many of the 112 solutions of 6 line-segments through the 16 dots as possible. The solution will be posted on or near the mathNEWS door, MC 3036, on April 1

The above problem comes from:

Shuh, Fredrick; The Master Book of Mathematical Recreations; Dover Publications, Inc.; New York; 1968; pg. 336,337

What do you consider a big number? A million? 10^{10} ? How about a googol which is 10^{100} ? This is definitely a big number, but you may well ask if it represents anything in the real world. The number of grains of sand required to fill the earth would only be about 10³², a large number but nothing compared to the googol. Even the number of subatomic particles in the known universe is only about

To get into the same league as googols, we must leave the world physical things and enter the world of electronics. For example, take the transatlantic phone cable. It stretches 2,250 miles across the Atlantic. Distributed somewhat evenly along its length are 51 electronic amplifiers (also called repeaters) which make up for losses along the cable by each amplifying the strength of the incoming signals approximately a million times. With 51 repeaters, the total amplification reaches a staggering 10^{306} which is so large that even the mighty googol shrinks from its presence in awe.

However, in the world of mathematics, even the googol does not reign supreme. Consider the function Li(n) which approximates the number of primes less than n (denoted by $\pi(n)$) and is defined by:

At n = 100,000, $\pi(n)$ is 9,592 while Li(n) is 9,630 so that Li(n) exceeds $\pi(n)$ by 38. At n=10 million, $\pi(n)$ is 664,579 while Li(n) exceeds this by 339. At n=1 trillion, $\pi(n)$ is 50,847,534 with Li(n) exceeding this by 1,701. It appears that the function Li(n) is a bit too large and this amount is getting larger. Although the difference between Li(n) and $\pi(n)$ does continue to increase on average, the fluctuations about this average can become so great that for some extremely large value of n, the value of $\pi(n)$ must exceed the estimate given by Li(n). No such numbers have been found, but it has been proven that they do exist and that there must be at least one of them smaller than $10^{10^{10^{34}}}$

The sheer enormity of this number is difficult to appreciate. It has been called the largest number which has ever served a useful purpose in mathematics, that is if you consider the above useful. As can be seen, this number greatly exceeds the googol or any number used in the physical sciences.

The above comes from:

Vergara, William C.; Mathematics In Everyday Things; Harper & Row; New York; 1959; pg. 114,115

Lines, Malcolm E.; A Number For Your Thoughts; Adam Hilgar Ltd.; Bristol; 1986; pg. 29,30

The Final Alias

Mathematical T.V.

Have you ever watched T.V. but felt guilty about not doing your math homework, or now with exams coming up, not studying for your calculus final? Well, with the new pay T.V. station for real math addicts, you can do both! I have managed to obtain a sneak preview of some of the shows that will soon be available.

M.A.S.H.

M.A.S.H. (Mathematically Addicted Sanitarium & Hospital), located in an isolated region of Korea to keep North American society safe. helps treat people who have overdosed on math. This is done mainly by giving them overdoses of English & Fine Arts to annihilate the effect of the math. This treatment is usually effective, but often has horrifying side effects, such as the individual becoming an engineer. Warning: people who watch this station, in particular this show, are being monitored as likely candidates to end up in this show the next week.

mathNEWS

Tune in every second week to watch a group of crazed individuals eat pizza and combine articles into a supposedly informative and humorous newspaper for math students. This show is recommended for those who want the inside knowledge of how weird math students' imaginations can be. It is especially recommended as a case study project for those studying psychology.

This show investigates in detail the five most important W's of most mathies: Wronskian's, Weierstrauss M-test, Winding numbers, Weddebum's Theorem on finite division rings, and Women.

Matthew Noneuclid (1849-1936)

A surprising number of students in this faculty are not aware that Matthew Noneuclid, the internationally famous mathematician, was actually born and raised in the area of Kitchener-Waterloo. To improve this terrible situation, we at mathNEWS have decided to publish this short biography.

Matthew Noneuclid was born in the family house, at the corner of King and Weber, in June of 1849. It is widely believed that Matthew's family was indexed by the finite set I. His three brothers, Dan, Frank, and Tom, had been orphaned and forced to fend for themselves three years earlier, and the new addition to their small family appeared to them as merely another mouth to feed.

It is not surprising that they did not have the time to lavish attention on Matt, but let him play outdoors. The young Noneuclid avoided the company of others of his age, and from his earliest years enjoyed crawling along the streets of K-W. As he grew older, he began to take crayon and paper with him on these journeys, and map the routes he followed. The influence of these formative years cannot be underestimated, and samples of his childhood cartography reappear in much of his later mathematical work.

We next hear of Matthew in 1868, on the occasion of his wedding with Catherine Commuta. For the marriage, the bride's family had booked Cauchy Cathedral. All the audience members agree that Catherine looked radiant as she walked down the aisle toward Matthew. The two came closer and closer together, but never managed to converge to the same point. By late in the evening, the church had emptied, and the discouraged couple gave up and returned

This episode profoundly influenced Noneuclid's development. He maintained a lifelong devotion to the woman he could not marry, to the exclusion of all other loves. Many years later, when Miss Commuta had passed away, Matthew commemorated her, in a seminal paper on abstract algebra, by bestowing her name on various rings (including the wedding band he had kept).

In 1876, having already established a reputation for himself as a mathematician, Noneuclid moved to Vienna. The European mathematical community welcomed the young man who had already developed the geometry that bears his name. In particular, Matthew established a firm friendship with Ferdinand Vector, a fellow mathematician two years his senior. It is probably with Noneuclid's abel advice that Vector finally developed his mathematical spaces.

After a long and illustrious career, Matthew Noneuclid died on February 29, 1936, in a little publicised duel against the German mathematician Franz Eigen. At issue was Eigen's plagiarism of some results in linear algebra that Noneuclid claimed to have discovered first. Matthew's remains now lie in the Salzburg cemetery, in the unmarked grave adjacent to Mozart's.

Alfred von Newman

Baseball Stories You're Likely To Hear in 1987

April 3 - New York Rangers GM Phil Esposito announced his resignation from the NHL franchise today. Shortly after, he signed a two-year deal as GM for the Chicago White Sox. Phil, in his statement to the press, proclaimed, "I just can't wait till the end of May without making some sort of a trade." Several hours after this announcement, the Sox completed a 35-player four-way deal involving Seattle, Oakland, and the Seibu Lions of the Japanese league.

April 15 - Atlanta's newly acquired second baseman Damaso Garcia was demoted to their Richmond farm club today. Shortly after being informed, Damo set Fulton County Stadium on fire, causing \$1.5 million in damage. This reporter overheard General Manager Bobby Cox saying, "Well, I guess old habits die hard."

April 19 - 48-year-old Phil Niekro, veteran pitcher and 300-game winner, announced his retirement today after his arm fell off in the third inning of the Indians' game against Baltimore. Niekro later said he thought he may have been pushing himself too hard by pitching this season.

May 23 - Roger Clemens won his twentieth game of the season today, leading the Austin City Texaco A's to a victory over the San Antonio Phil's Used Car Lot Tigers. Clemens, 20-0 with an ERA of 0.31 and 412 strikeouts, continues his holdout from the Red Sox; his contract demand now being \$5.3 million a year. The Sox have countered with accrued fines of \$780,000.

June 19 - Royals' right fielder Bo Jackson signed a contract with the Kansas City Chiefs of the NFL today. He will continue to play for the Royals, crossing the parking lot to play running back between innings at the Cheifs' home games.

July 7 - National League officials have discovered that the foul lines at Pittsburgh's Three Rivers Stadium are 90% pure cocaine. Further investigations are to be conducted to determine if the recent hiring of Steve Howe to the grounds crew has anything to do with the incident.

July 29 - Yankees owner George Steinbrenner today fired Billy Martin, but retracted his announcement when he was informed that Lou Piniella was still manager, and that Martin had not been re-hired.

August 10 - California Angels center fielder Gary Pettis was lost for the balance of the season today when a line drive off the bat of Texas slugger Pete Incaviglia went through his chest. Manager Gene Mauch was quoted as saying, "This sure leaves a big hole in centre field for us."

August 26 - Houston reliever Charlie Kerfeld retired today to join the WWF Wrestling circuit.

Sept. 17 - Pope John Paul II interrupted his visit to southern California today to catch a game between the Dodgers and the Cincinnati Reds. Dodgers manager Tommy LaSorda, desparate for help in left field, signed the pontiff to play their next game against the Braves. The pope responded by going 3-for-4 with a triple and two RBI's. John Paul is reportedly asking for a \$400,000 guaranteed contract for

Vin Garagiola

Good morning math-cadets. Navigation reports that the W.S.S. Mathundergrad will soon be arriving at term-end. And every good cadet knows what that means ... more final (in more than one sense of the word) examinations. Perhaps the best prescription would be to start studying ... now! (Seven weeks behind isn't all that bad!) But with no warp drive, and only impulse power remaining, things are looking pretty grim ... And yet, maybe ... just maybe... Perhaps it's not too late to approach your prof and explain that you thought the section was Soc 101 and that the lectures had strayed a little off topic (for those cadets really in Soc 101, don't worry, you already passed) .

. . Or how about skipping off to Sidi-bel-Abbes, Algeria, and stretching a weekend pass into a fifteen year enlistment in the French Foreign Legion (didn't your parents always say that a second language would come in handy?) . . . And if nouvelle cuisine isn't your thing, it mightn't be too late to bring your prof a bright, shiny, red apple. (Remember Snow White? Just one tiny bite . . . and the prof won't regain consciousness until Greg Sorbara kisses him full on the lips (brrrr, skarrrry keeds!) long, long after they determine the failure list for your section) ... But before you begin to heat up the caldron, there may be time left to peruse ...

mathNEWSquiz #18

- 1. Which significant event in Canadian history occurred on September 13, 1759?
- 2. Who authored the Lord Peter Wimsey detective stories?
- Which fruit provides the basis for the Norman brandy, "Calvados"?
- 4. The Julius Caesar spoof, "Rinse the Blood Off My Toga", is associated with which comic duo?
- 5. Which twentieth century French statesman and premier remarked that "America is the only nation in history which miraculously has gone directly from barbarianism to degeneration without the usual interval of civilization"?
- 6. Which peninsula is surrounded by the Kattegat, Skagerrak, and North Sea?
- 7. By what name is Vladimir Ilich Ulyanov better known?

ft

- 8. Name the first Canadian-bred horse to win the Kentucky Derby?
- 9. The following lines were penned by which English poet: "She walks in beauty like the night/ of cloudless climes and starry skies;/ And all that is best of dark and bright/ Meet in her aspect and her eyes . . . "
- 10. What do "Appassionata", "Moonlight", "Pathetique", "Tempest", and "Waldstein" share in common?

Quiz solution may be submitted on or before April 5, 1987, either in the "Black Box" (if it should find its way back onto the wall) outside the C+D Lounge on the third floor or under the mathNEWSofficedoor (MC 3036). Consideration will be given to all solutions, and please be sure to include a mailing address. Solutions to math-NEWSquiz #18 and our final mathNEWSquizexpert will be posted on the mathNEWSofficedoor sometime soon after the submission deadline. (They may even be published in V 44, n 1 of mathNEWS.)

And now, expressly for those 4N and 4B cadets about to go up before the parole board, the solutions to mathNEWSquiz #17: Ray Bradbury's "Fahrenheit 451"; Walter Gropius & the "Bauhaus" school of design; pralines; "A Mari usque ad mare" or "From Sea to Sea" is Canada's motto; the quote belongs to Oscar Wilde; Switzerland; Canada's smallest national park is St. Lawrence Islands National Park in Eastern Ontario (1,024 acres); "Le Blaireau", "The Badger" is Tour de France champion Bernard Hineault; "The Tyger" by William Blake; and Blenheim, Elixhem, Ramilles, Oudenarde, and Malplaquet are all battlefield victories of John Churchill, First Duke of Marlborough, against the Franco-Bavarian alliance during the War of the Spanish Succession (the mathNEWSquizmaster notes that two cadets responded correctly to this question), whew!

"Pink Tie Alert!" There are double winners this week . . . Anthony Egerhazi (frosh power!) and Jeff Clark & John Barnett (three-time champions) with nine out of ten scores. Congratulations to you, Anthony and Jeff&John, and you may collect your prize and especial mathNEWSquizexpertcertificate in the MathSoc office (MC 3038) during their hours. Good solutions were submitted by the following cadets: W.J.Jordan (5); Karen Joyce (4); and in no definite order Irene Bosnich, Steve Murdoch, Paul Myers&Melanie Leganchuk, and "The Whizzo Chocolate Co." The best good fortune to you and all other cadets on mathNEWSquiz #18.

And now a few commercial messages. One hundred and eighty questions later, and I never really thought that this column would make it past mathNEWSquiz #1 (which was dictated over the telephone one dark and stormy night). Thanks to the many friends who served as the proving grounds for the countless duds and few questions that actually made into mathNEWSquiz. And an especial thank-you to the following true cadets: Glenn MacFarlane (who said "Why not!") and Dave Leibold during the first term; Paul Obeda for his help with the countless teething problems and the mathNEWSquizexpertcertificate (!); and dan "mathNEWScoveritis" schnabel. mathNEWS really wouldn't have happened without your help. And perhaps, now, a few words to returning math-cadets. Oftentimes over the past terms cadets have complained that "mathNEWS stinks this week", or "I remember when mathNEWS was good, back in 1A", or "Why don't they get some writers who can write 'humour' ". The simple answer to these comments is that mathNEWS is only as good at its contributors allow it to be. It's really that fundamental. (You know, "Garbage in, garbage out" and all that stuff.) If you know that you can create better "stuff" than the worst "blatant mathNEWSfiller" in this edition, then the mathNEWS quizmaster can only implore that you submit your ideas to mathNEWS via the "Black Box", or (better yet) in person during production nights. The pseudonyms are free. And don't forget to take your pay in pizza! Until that time, mathNEWS will continue to be faithfully conjured each term by the small (but utterly loyal) band of math-cadets who are out tonight. And by the way, the mathNEWSquizmaster contributed via "Martin+Siegfried" during the dark days of prehistory (pre-3B). Pseudonyms revealed. Adieu.

> Frank Grossman the mathNEWSquizmaster.

Cryptic

- 1. In addition, the first person surrounded alternatively (4)
- 3. A scientist about to hesitate at the end of the quest (10)
- 10. Relatively speaking, the son of a piano? (10)
- 11. Out of the loud Toronto museum (4)
- 13. Maybe can rule at a very small level (7)
- 14. Obviously after Greek source of power (7)
- 15. Zero back at the waterfall (3)
- 16. The bird may fight the things in a line (7)
- 19. Many an old English deer (3)
- 20. Make the pastry, quietly that is (3)
- 21. For a tax on the operation (7)
- 23. The man is affirmatively Spanish and right (3)
- 25. After a month, I took half the Bible to be enlarged (7)
- 28. Fish limb country? (7)
- 29. Mary could be in the service (4)
- 30. For popular opinion basis, a mode to Arctic arrangements (10)
- 32. Rants about the poetry cross-wise (10)
- 33. Rate of the length sensation (4)

- 1. The mother, soldier and accountant took fifty by way of tricks (7)
- 2. Order (again) the back stove (9)
- 4. The alien female possessive anaesthetic (5)
- 5. A certain woman-she is French with direction (5)
- 6. The right year for the sun god (2)
- 7. I abhor seeing old transportation (5)
- 8. Deep sorrow noted over the code (7)
- 9. Promotion over being a beautiful youth (6)
- 12. Barge directly over the animal (4)
- 17. Fuss from a party (3)
- 18. An initial ritual of eating caviar (3)
- 19. The princess' covering is stripped (9)
- 20. The vegetable's insect for the serf (7)
- 21. A pale way to beg (4)
- 22. With an oriental coin, attempt to guard (6)
- 24. The root is 'cool, man' (7)
- 26. A program made inside the Greek letter (5)
- 27. Central idea of those guys directly (5)
- 28. A loud defeat of teeth care (5)
- 31. Like a direction (2)

Return of the GridComments

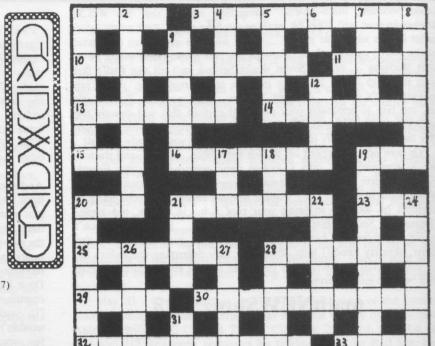

Well, I made it back. Sorry I wasn't here last issue but a change of pace is good sometimes anyway. I thank Tom for filling in on short notice. This being the last issue of the term, there will be no prizes for this puzzle but I hope you enjoy it anyway. The grid this issue is slightly larger than I've been doing this term.

There were a few errors in the solution printed last issue (if anyone care).5 4d should have been 'stylus', 11a should have been 'unable' and 15d should have been 'again'. I hope this didn't cause anyone any problems.

Last issue's puzzle saw a submission rate of 38, of which 20 were correct. By the Woody Tobias Sr. pseudo-random communication mystery method, the winner is Scott Hayward and Jonathan Koven. They may pick up their prize at the MathSoc office MC3038 before it closes for the term. Congratulations to all the winners of the term.

Other correct submitters: Woody Tobias Sr. (thanks for the print-, Johnny Ramone, Irene Bosnich, Smurf. able soln), len popp B Colin B., S-1 AS, Phideaux, Gary Merke, Scottie's little softie, Jeff ('and the noisy bastards sitting with me'), Cathy B., Karen Joyce, Mike Hess, Artie S., Jim Sankey, Lance Sibley, Robert Brown, and Sen. Ted Kennedy (we're honoured (or not)).

Further entities: Ozzy Ozborne, Manute Bol, Johnnie Knowall, MC Miker J & DG Sven, Blue Giraffes, JJ, Bored & Confused & Fantasizing in PMATH, Mark and Alan, 3M & D, Paul Myers & Melanie Leganchuk, Chris & Pookey, Gary M, Roger Spitzig & Barry Esau, D.G.R., Jim Spallin & Manny Weiser, Kimberley Brady & Shane Donovan & Andrew, Steve 'Patch' Johnson & Max, and Orpheus & Kiriakis.
